Title	Sample	In Progress	Solution
	1. Draw squares (□) in some of the white cells. 2. A group of squares connected vertically and horizontally is called a “block” (including only one square). Each block must contain exactly one square placed on a pre-drawn arrow. 3. Each arrow must pass through at least two blocks. 4. The second and later blocks on the route of an arrow from start to end must progress by adding one square to the previous block without rotating or flipping.		
Five Cells				1. Divide the grid into blocks of five cells. There can be no blocks with fewer (0 – 4) or more (six and over) cells. 2. A number in a cell shows how many lines of a block there are around it, the number includes the lines of the outer frame. 3. There may be as many as 5 cells with numbers in a block. 4. Lines must surround a cell and cannot enter a block.		
Fillomino				1. Fill in all empty cells with numbers under the following rules. 2. Divide all of the board into blocks. Fill each block with the same number horizontally or vertically. 3. Each block contains as many cells as the number in the block. 4. Same sized blocks cannot touch each other, horizontally or vertically.

<tr><th>Title</th><th>Sample</th><th>In Progress</th><th>Solution</th></tr>
<tr><td rowspan="2">Pencils</td><td></td><td></td><td></td></tr>
<tr><td colspan="3">

1. Here you have to mark out pencils, draw lines from the tip ( ) of the pencils, and use the numbers in the pencils. The lines go through the cells from the tip of pencils.
2. A pencil is a straight group of one or more cells with the tip (the lead) at one end. The line from the tip goes through the center of cells horizontally, vertically, or turning.
3. The cell with a number in the pencil, shows the length of the pencil. One pencil may have no, one, or several numbers in its cells.
4. The line from the tip of the pencil goes through one or as many cells as the number in the pencil.
5. The line from a pencil cannot cross itself or branch off.

</td></tr>
<tr><td rowspan="2">Ripple Effect</td><td></td><td></td><td></td></tr>
<tr><td colspan="3">

1. The areas divided by bold lines are called “Rooms”. Fill in all empty cells with numbers under the following rules.
2. Each Room contains consecutive numbers starting from 1.
3. If a number is duplicated in a row or a column, the space between the duplicated numbers must be equal to or larger than the value of the number.

</td></tr>
<tr><td rowspan="2">Sashigane</td><td></td><td></td><td></td></tr>
<tr><td colspan="3">

1. Divide the grid into L shaped blocks – one block wide. All blocks must be L shaped.
2. Cells with open circles form the knee (bend) in a block.

</td></tr>
</table>

Title	Sample	In Progress	Solution
	3. The number in an open circle shows the number of cells in its block.Open circles without numbers may have any number of cells. 4. Cells with arrows form one end of its block, the arrow points towards the knee of this block. 5. The number of marks in a block (arrows or open circles) may be 0, 1, 2, or 3. ∗ Sashigane is the Japanese for a carpenter's square.		
Satogaeri				1. The areas enclosd by bold lines, are called "Countries." Move the circles, vertically or horizontally, so each country contains only one circle. 2. The numbers in the circles indicate how many cells they have to pass through. Circles without numbers may move any distance, but some of them do not move. 3. The circles cannot cross the tracks of other circles and cannot go over other circles.		
Shakashaka				1. Place black "triangles in squares" (see 2) in the grid under the following rules. 2. There are four kinds of black triangles you can put in the squares:  . You cannot place black triangles in the black squares. 3. The parts of the grid that remain white (uncovered by black triangles) always form a rectangle or a square. 4. The numbers indicate how many black triangles are around it, vertically and horizontally.		
Shikaku			
Title	Sample	In Progress	Solution
	1. Divide the grid into rectangles with the numbers in the cells. 2. Each rectangle is to contain only one number showing the number of cells in the rectangle.		
Slitherlink				1. Connect adjacent dots with vertical or horizontal lines to make a single loop. 2. The numbers indicate how many lines surround it, while empty cells may be surrounded by any number of lines. 3. The loop never crosses itself and never branches off		
Sto-stone				1. Fill in the colored cells with the following rules. 2. The areas enclosed with bold lines are called “Rooms.” The number in a room shows the number of continuous black cells in that room. Rooms with no number may have any number of black cells. 3. Black cells cannot connect across bold lines, vertically or horizontally. 4. When all stones are “dropped”straight down (empty cells under colored cells deleted) the stones must fill the bottom half of the grid without empty cells (then dropped stones may cross and connect across bold lines).		
Sudoku				1. Place a number from 1 to 9 in each empty cell. 2. Each row, column, and 3×3 block bounded by bold lines (nine blocks) contains all the numbers from 1 to 9.		

<table>
<tr><th>Title</th><th>Sample</th><th>In Progress</th><th>Solution</th></tr>
<tr><td rowspan="2">Suraromu</td><td></td><td></td><td></td></tr>
<tr><td colspan="3">1. Make a single loop with lines passing through the centers of cells, horizontally, vertically, or changing direction. The loop never crosses itself, branches off, or goes through the same cell twice.
2. The continuous dotted lines between black cells or to the outer frame are “Gates.” The loop must pass all Gates, but a Gate can only be passed once.
3. The loop starts from the cell with the open numbered circle and returns to this cell. The number in the open circle shows the number of Gates to go through.
4. Numbers at the ends of Gates – in the black cells – show when the loop crosses the Gate. A Gate without a number may be crossed at any point in the loop. For example, a Gate with a “1” must be the first crossed (in one of the directions) from the cell with the open circle.</td></tr>
<tr><td rowspan="2">Tilepaint</td><td></td><td></td><td></td></tr>
<tr><td colspan="3">1. The areas enclosed by bold lines are called “Tiles” and you color the tiles with the following rules.
2. A number in a cell with a diagonal line tells the number of black cells there has to be to the right or downward in the line/column of the cell with the diagonal, till the limit of the grid or another cell with a diagonal and numbers.
3. The cells of a tile must all be colored or left uncolored.
4. The solution will show the outline of a thing or object.</td></tr>
<tr><td rowspan="2">Usowan</td><td></td><td></td><td></td></tr>
<tr><td colspan="3">1. Fill in (colored) cells with the following rules.
2. Cells containing numbers cannot be colored.</td></tr>
</table>

Title	Sample	In Progress	Solution
	3. The number shows how many colored cells are next to a cell, vertically and horizontally. However, in each rectangle bordered by bold lines, there is one (and only one) wrong number (showing a wrong colored cell number). 4. Colored cells cannot connect horizontally or vertically. White cells must not be separated by colored cells.		
Yajilin				1. Draw a line to make a single loop. 2. Lines pass through the centers of cells, horizontally, vertically, or turning. The loop never crosses itself, branches off, or goes through the same cell twice. 3. The numbers show how many black cells there are in the direction of the arrow. 4. The loop does not pass through the black cells or the cells with numbers, and black cells cannot touch horizontally or vertically. 5.		
Yosenabe				1. Move all circles, vertically or horizontally, so they enter the gray areas. 2. Show the movement of a circle by an arrow, with the tip of the arrow in a grey cell. The arrows do not bend, and do not cross other white circles or lines of other arrows, they go straight to their grey area. 3. The number in a gray area must be equal to the total of the numbers of the circles which enter the area. Empty gray areas may have any sum total, but at least one circle (arrow tip) must enter a gray area.
